

(a) Where order freedom enters

Every schedule uses 256 NFEs and commits exactly one token after each NFE.

Sequential $B = 1$

Blockwise any-order $B > 1$

Ranking rule ($B > 1$)

Confidence-first (CF)
 $\max p_{\theta}(\tilde{x}_i | x_t)$

Random (RND)
 $u_i \sim \mathcal{U}(0, 1)$

Entropy-first (EF)
 $\max H[p_{\theta}(\cdot | x_t)_i]$

(b) Conceptual crossing
